Klamath Tech Collective

UpRiv | Upcycle — Community Tech Donation Program

Donating Your Organization's Retired Tech

Keep it out of the landfill. Keep it in the community.

The Klamath Tech Collective's UpRiv | Upcycle program intercepts usable computers before they hit the landfill, refurbishes them, and gets them to people, families, and organizations across the Klamath bioregion at no or low cost. Donations from organizations like yours are one of our biggest sources of devices.

What We Accept

- Laptops and desktops manufactured 2012 or newer, working or not
- Servers and networking equipment
- Peripherals when donated alongside a working system (docks, cables, monitors)

Not currently accepted: CRT monitors, printers/toner, large appliances, or devices with a physical safety hazard (e.g., a swollen battery) that hasn't been disclosed in advance. When in doubt, just ask.

How It Works

1. Reach Out

Email contact@klamathtech.diy with a rough count and type of devices.

2. Schedule

We'll arrange whatever works for your organization: a pickup, a drop-off time, or mail-in instructions.

3. Sign & Itemize

A short Donation Agreement and Item Checklist take a few minutes to complete — on-site at drop-off or pickup, or included with a mailed shipment.

4. Get Your Paperwork

You'll receive a signed Acknowledgment of Donation, plus a Certificate of Erasure if you requested secure data wiping.

Your Data, Handled Right

Data erasure is optional and Donor's choice — request it and we'll take care of it. Devices are wiped with a multi-pass software erasure (ShredOS) following NIST SP 800-88 media sanitization guidance; drives that can't be wiped are physically destroyed or degaussed instead. Either way, you'll get a signed Certificate of Erasure matched to each device (serial number or description — whichever you have), listing exactly what was done and when. We respect your organization's data sovereignty: our volunteers do not review, access, or copy any data on your devices — our role is limited solely to performing the erasure you request.

A Note on Taxes

Klamath Tech Collective is an unincorporated community collective, not a registered 501(c)(3) nonprofit — so this isn't a charitable tax deduction. What it is: usable equipment diverted from the waste stream, a hand up for people who need a working computer, and support for closing the digital divide across the Klamath bioregion. We think that's worth doing regardless of the tax angle, but we want to be upfront about it from the start.
